

ADLEN XR

Technical Analyst | Business Intelligence & Data Analytics | Automation | Search Optimization & Digital Marketing
Chennai, India • +91 73581 21164 • adlenfebi@gmail.com • [LinkedIn](#) • [Portfolio](#) • [GitHub](#)

PROFESSIONAL SUMMARY

Detail-oriented Technical Analyst with 2+ years of experience at Amazon in data validation, search query analytics, business intelligence, workflow optimization, and process automation. Skilled in building BI dashboards and reports using Power BI and Tableau — translating raw operational data into visual insights that drive business decisions. Proven ability to analyze search query failure rates, identify content and relevance gaps, and implement data-driven improvements that enhance search performance and user experience. Proficient in Python, Selenium, Playwright, SQL, Excel (Advanced), Power BI, and Tableau. Known for delivering end-to-end solutions — from data collection and validation through to automated reporting and executive-level dashboards — that reduce manual effort, improve operational efficiency, and support informed decision-making across teams.

CORE COMPETENCIES

Business Intelligence (BI) • Power BI • Tableau • Data Visualization & Dashboards • KPI Reporting • Search Query Analytics & Failure Rate Analysis • Content Relevance Optimization • Data Validation & QA • Process Automation • Python (Selenium, Playwright, Tkinter) • SQL • Excel (Pivot Tables, VLOOKUP, Macros, VBA) • Data Interpretation & Insights • Business Analysis • Agile / Scrum • Workflow Optimization • Stakeholder Communication • Documentation & SOPs • Jira • Git & GitHub

PROFESSIONAL EXPERIENCE

Digital Content Associate — Technical Analyst | Amazon

July 2024 – Present • Chennai, India

- Researched and analyzed search query failure rates — identifying patterns in failed, zero-result, and low-relevance queries, and implementing targeted content and metadata corrections to improve search accuracy and result quality.
- Built and maintained Business Intelligence (BI) dashboards using Power BI and Excel to visualize operational KPIs, content quality metrics, and productivity trends — enabling management to make faster, data-backed decisions.
- Designed automated reporting pipelines that pulled data from multiple sources, transformed it, and delivered structured BI reports to stakeholders on daily/weekly cadences — reducing manual reporting effort significantly.
- Conducted ongoing search performance monitoring and root cause analysis on query failures — tracking metrics, categorizing failure types, and documenting actionable fixes to reduce failure rate over time, directly supporting search optimization and discoverability.
- Designed and developed an end-to-end Productivity Entry Tool using Python (Tkinter) with Employee and Super Admin screens, enabling real-time tracking of work metrics and team transparency.
- Automated content validation and reporting tasks using VBA Macros, Selenium (Java & Python), and Playwright (Python) — saving \$1,000+ in manual effort and improving processing consistency.
- Performed large-scale data validation and quality analysis to ensure accuracy across datasets, supporting key business and product decisions.
- Analyzed workflow and operational metrics to identify bottlenecks and implemented process improvements to optimize turnaround time.
- Collaborated with cross-functional stakeholders to align content quality and efficiency initiatives with product and business goals.

Technical Business Analyst (Trainee) | Paladin

January 2024 – June 2024 • Chennai, India

- Drove Agile sprint activities — backlog grooming, sprint planning, and task prioritization — to maintain project momentum and delivery alignment.
- Collected, analyzed, and documented business requirements and user stories from stakeholders for backend development projects.
- Evaluated system processes, identified gaps and inefficiencies, and recommended process and feature improvements to enhance project outcomes.
- Prepared structured reports and documentation for project tracking, performance analysis, and data-driven decision-making.

PROJECTS

Business Intelligence Dashboards & Operational Reporting | 2024 – Present

- Designed and built Power BI and Excel-based BI dashboards to visualize content quality metrics, productivity KPIs, and operational performance across teams at Amazon — delivering actionable insights to stakeholders in an easy-to-consume visual format.

- Created automated reporting pipelines using Python and VBA to extract, transform, and load (ETL) data from multiple operational sources into centralized dashboards, enabling real-time performance tracking.

Search Query Failure Rate Analysis & Optimization | 2024 – Present

- Analyzed patterns in search query failures at Amazon — zero-result queries, low-relevance results, and search drop-offs — identifying root causes and implementing content-level fixes to improve discoverability and query success rates.
- Maintained dashboards tracking failure rate trends over time, enabling data-driven decisions on content correction priorities.

Productivity Entry Tool — Python Desktop Application | 2024

- Built a dual-mode desktop application (Employee + Super Admin) using Python Tkinter for real-time work metric entry and monitoring, replacing manual tracking processes.

Automation Frameworks — Selenium & Playwright | 2024

- Built reusable automation frameworks for content validation and regression testing using Selenium WebDriver and Playwright (Python & Java), saving significant manual effort across recurring operational tasks.

Movie Production Expense Tracking System | April 2024 – June 2024

- Collected department-wise production data, analyzed total costs, and built reporting dashboards for decision-making and expense monitoring across all movie departments.

Cafe Employee Management System | January 2024 – March 2024

- Documented requirements for employee attendance, work hours, and payroll; mapped workflows and created process documentation for backend payroll system implementation.

Responsive Web Application | 2022 – 2023

- Designed and developed responsive web apps using HTML, CSS, JavaScript; handled API integration, data validation, and version control (Git).

EDUCATION

BTech – Bio Medical Engineering | Dr. MGR Educational and Research Institute

2020 – 2024 • Chennai, India • CGPA: 8.87

CERTIFICATIONS & LANGUAGES

- Diploma in Computer Application
- SQL Certification
- Python Certification
- Certified 'English Junior' – Typewriting
- Languages: English (Professional), Tamil
